**\*\*Photoshop CC:\*\*** The essential version of Photoshop for graphics and web designers; it costs \$700. Best for Expert Photoshop Users You can use Photoshop CS6 (and its later-rebranded Photoshop CC) as a powerhouse of photo manipulation and color adjustment to achieve professional results with ease. It has many more tools and features than previous versions and should be your first choice if you're a seasoned photographer or graphic artist. I cover this program extensively in Chapters 13 and 14.

**\*\*Photoshop Elements:\*\*** A step below Photoshop CC in terms of features; it costs \$350. Best for Beginners If you're not familiar with Photoshop and all the bells and whistles, I prefer Photoshop Elements. At its lowest, it's \$150, and you only get those features most people use, such as masks, basic color adjustment, and the GIMP free alternative (covered in this chapter). Best for Web Designers If you use elements of web design for your work, I highly recommend Photoshop Elements. You'll save so much money by using the web-design tools that it'll be a no-brainer. I cover Elements, its strengths, and weaknesses in Chapter 8.

**\*\*GIMP:\*\*** GIMP is the free (gratis) alternative to Photoshop, offering layer-based, vector-based (freehand drawing) manipulation and many other features. GIMP is a close approximation to Photoshop and is considered a good program for beginners. It's even bundled with Elements, so you don't need to buy it separately. I cover GIMP in Chapter 9. I've read many people's bad experiences with the online versions of Photoshop, so I'm not a big fan, but some people swear by them. I would recommend trying them out before you buy your own copies.

**11 Photoshop Tricks To Improve Your Skills**

**1. Create a New Layer** You'll start off by adding layers to the photo you want to edit. First, open Photoshop and click the tab in the top toolbar where you can select Photo or Photoshop.

**Step 1: Click the Photo tab in Photoshop** Click the Photo tab on the top toolbar to open Photoshop's Photo Editor. Now, make sure you have layers and all the tools you need to make your photo look great. Also, to make sure you're editing the correct layer, make sure that the layer is selected by clicking on it in the Layers panel. Click the layers tab in the top toolbar, select the Topmost Layer and then click OK.

**Step 2: Select the Topmost Layer** Click the Layers tab, click the button for Topmost Layer and then click OK. When you click OK, Photoshop selects that layer.

**2. Edit the Background** You'll start by clicking on the layer, which is the photo you want to edit. In this case, it's the photo of a guy. By default, Photoshop will have a white background. Make sure it doesn't have a background by clicking the Photo tab. Now that your background is the correct color, you'll want to change it. Click on the Background tool, which is the default tool.

**Step 3: Change the Background Color** Before you change the color, make sure you're on the Topmost Layer. Then, click the color box and change the color to your liking. Alternatively, you can click the Color 388ed7b0c7

Q: Hiding Option Menu Items in Windows Phone 8.1 I've been searching around for a solution to hide the option menu items in windows phone 8.1, that I've just posted as a question here. So far all the tutorials I've found just show how to handle option items in the way that they show themselves (i.e. showing them with text). I'm asking if there is a way to hide them in the first place. A: In Settings.xaml, navigate to the StartupScreens section. Either add a new Screen or add a Screen to a Folder (Menu). Then go to Properties and choose the following: Name: Dashboard Actions: Settings Remove the Screen Navigation and Add the Screen to Startup screen. Doing this should hide the 'settings' option menu from ever appearing on the start screen. Q: Forced to pay large interest because private bank lost paperwork I was signing an agreement in Italy for a loan for €350,000 and the bank said that the bank that had received the request had lost part of my file for signing. First of all, the bank said that it was a private bank and that the cost of document recovery were beyond our control, but I said that this was not true since the company I was applying for that loan is part of a big business and should have had its own team to keep all the documents of the projects in which it took part. So, the bank was not considering any legal compensation for the lost files. The agreement I was signing was for a mortgage. The said bank was ARX. Is this normal? A: If you were charged any interest because of losing paperwork it would be illegal in most jurisdictions. "Fairly standard" documentation might allow for a point of a difference, but not for the kind of large sum you mentioned. If I remember correctly, most countries that have consumer protection like this also have some form of deposit insurance; the bank might have just been slightly over the limit that allowed it to get away without doing anything. As an aside, your co-operation in this is probably a pretty good indicator that you will have success in claiming a refund. No one wants to be dealing with a bunch of pissed off customers. A: I can't comment on Italy. In most (all?) common law countries (UK,

Low-energy electron microscopy of thin ferromagnetic layers. Low-energy electron microscopy (LEEM) is a powerful technique for imaging surfaces in materials science. However, its use for imaging thin ferromagnetic films is hampered by magnetic artifacts. Here, we demonstrate that LEEM can be used to image the dynamic magnetic behavior of Fe/Ag and Co/Cu bilayers at room temperature without interferences from ferromagnetic domains. We show that ferromagnetic domain nucleation is limited to much thinner multilayers than what has been previously reported. Imaging the nucleation of domains while monitoring the local magnetization in an ion beam-induced local magnetic field allows us to determine the critical thickness for nucleation of ferromagnetic domains.Q: Search the history for a word in eclipse I want to open the browser and search for a word that was in a file. I can do it with the search history. How can I do that? A: You can use the context menu: Select Open Context Menu... Choose the menu item: Search History That will bring up the context menu. You should find what you want listed in the "Editing menu", which also includes "Search" but that's what you are already using. package(default\_visibility = ["//visibility:public"]) load( "@io\_bazel\_rules\_go//go:def.bzl", "go\_library", ) go\_library( name = "go\_default\_library", srcs = [ "doc.go", "fake\_authorization\_client.go", "fake\_v1beta1.go", ], importpath = "k8s.io/client-go/kubernetes/typed/authorization/v1beta1/fake", deps = [ "//vendor/k8s.io/api/authorization/v1beta1:go\_default\_library", "//vendor/k8s.io/client-go/kubernetes/typed/authorization
